

## PRESS RELEASE

### **CLC pro “Classic”, a strong cultivator for light tractors**

01/01/11 Les Landes Génusson, France

The CLC pro Classic has been designed to offer a 3-bar cultivator for smaller tractors. Based on the well-known CLC pro strong frame, the Classic variant is equipped with an easy and compact module for rear accessories which enables lighter tractors from 90hp (3,00m) to handle it. The Classic range will be available as 3.0 – 3.5m rigid and 4.0m folding version.

#### **Think strong, not thick: Kverneland hollow tine technology**

More than 20 years ago, Kverneland was the first to supply the market with a “light” tine concept by using a tube as cultivator tine. Due to the same heat treatment processes as implemented for its ploughs (case hardening, cementation), Kverneland is able to supply a cultivator with “zero maintenance” tines.

The hollow tine technology advantages are the **flexibility** and the high **vibration** capacity (“jack hammer” effect). In addition to the renowned Auto-reset leaf spring from

Kverneland, the inherent strength built into the tines enables them to withstand sideways movement of up to 14cm even by going 25 cm high, protecting the tine holder and the frame of high stress picks. For the CLC pro Classic model Kverneland offers two Auto-reset options: a new one releasing from 450kg (dedicated to the Classic range) and the 640kg range.

This system also offers the best penetration and crumbling effect of the soil reducing power consumption.

Even the shear bolted tine using the **Vibromat®** effect, needs to trip 10 cm backwards before reaching the 2T breaking points, avoiding untimely downtime for those who do not need Auto-reset.

### **A new levelling module**

In order to get a light and compact combination with the large range of rollers that the CLC pro line is offering, a set of levelling tines has been fixed to the roller frame by a standard pair of arms. To ensure a perfect levelling in all conditions those passive tines are adjustable in height and in rotation by an infinite screw.

With the large range of rollers available, including the new Actiring and the Actipack, the CLC pro Classic can cope with all soil conditions and leave a weather-proof top layer or a firm seedbed with a surprisingly low power requirement.
